

## CLAIMS

- 1 1. A coaxial feedthrough connector for connecting an RF signal through a wall in a  
2 hazardous environment, the connector comprising:
  - 3 (a) a base having an axial passage defined by a passage interior surface;
  - 4 (b) a coaxial transmission line extending through the passage; and
  - 5 (c) a nonconductive sealing compound filling at least a longitudinal segment of the  
6 passage and sealingly engaged to both the transmission line and to the passage  
7 surface.
- 1 2. A connector in accordance with claim 1 wherein the sealing compound is a silicone  
2 sealing compound.
- 1 3. A connector in accordance with claim 2 wherein the silicone sealing compound is a  
2 two part, GE-RTV-627 compound.
- 1 4. A connector in accordance with claim 1, wherein a coaxial connector is mounted in an  
2 end of the passage for connection to a coaxial cable, the coaxial connector being  
3 electrically connected to the transmission line.

1 5. A connector in accordance with claim 4 wherein the base has a threaded boss  
2 extending from the base and coaxially with the passage for connecting the base to the  
3 wall or to a conduit connected to the wall.

1 6. A connector in accordance with claim 5 wherein a radome is mounted on the base  
2 opposite the boss and an antenna radiating element is mounted within the radome and is  
3 electrically connected to the transmission line.

1 7. A connector in accordance with claim 1 wherein the base comprises an outer base  
2 member and a coaxial insert mounted in a coaxial bore formed in the outer base member,  
3 the coaxial insert having a central passage coaxial with a central passage in the outer base  
4 member, the central passages being contiguous and together forming said axial passage.

1 8. A connector in accordance with claim 7, wherein the central passage of the outer base  
2 member is smaller than the central passage of the insert and a coaxial cable connector is  
3 engaged in the end of the smaller central passage, and wherein the sealing compound  
4 extends into sealing contact with the coaxial cable connector.

1 9. A connector in accordance with claim 8 wherein an interior, annular shoulder is  
2 formed in the insert adjacent the central passage of the outer base member for increased  
3 sealant sealing area between the insert and the outer base member.

1 10. A connector in accordance with claim 9 wherein the base has a threaded boss  
2 extending from the base and coaxially with the passage for connecting the base to the  
3 wall or to a conduit connected to the wall.

1 11. A connector in accordance with claim 10 wherein a radome is mounted on the base  
2 opposite the boss and an antenna radiating element is mounted within the radome and is  
3 electrically connected to the transmission line.

1 12. A connector in accordance with claim 11 wherein the sealing compound is a silicone  
2 sealing compound.

1 13. A connector in accordance with claim 12 wherein the silicone sealing compound is a  
2 two part, GE-RTV-627 compound.

1 14. A connector in accordance with claim 1, wherein a coaxial boss is formed at each  
2 opposite end of the base, a coaxial cable connector is mounted in the boss at each end of  
3 the passage and each coaxial connector is electrically connected to an opposite end of the  
4 transmission line and in sealing contact with the sealing compound.

1 15. A connector in accordance with claim 14 wherein the sealing compound is a silicone  
2 sealing compound.

- 1 16. A connector in accordance with claim 15 wherein the silicone sealing compound is a
- 2 two part, GE-RTV-627 compound.
